## Problem 1

- a) Qualitative, ordinal
- b) Qualitative, binary
- c) Qualitative, ordinal
- d) Quantitative, continuous
- e) Quantitative, discrete

## Problem 2

- a) Descriptive summaries of the depression scores for 14 individuals in a study

```
# data input
depression_score <- c(45, 39, 25, 47, 49, 5, 70, 99, 74, 37, 99, 35, 8, 59)
# calculate descriptive summaries
mean_score <- mean(depression_score)
median_score <- median(depression_score)
range_score <- max(depression_score) - min(depression_score)
sd_score <- sd(depression_score)
```

Mean: 49.36  
Median: 46  
Range: 94  
SD: 28.85

- b) Box plot of the depression scores of 14 individuals

```
# create a box plot
boxplot(depression_score, main = "The depression scores of 14 individuals", ylab = "The depression score")
```

**The depression scores of 14 individuals**
